Methylene Blue
Analysis

Customer Name: M. J. J.Address: 100 Claremont Ave. Bensalem Pa 19020

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) 1.4 μg (micrograms) indicate archival quality, and greater than ($>$) 1.4 μg indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD ($<$) 1.4 μg	DOES NOT MEET ANSI STANDARD ($>$) 1.4 μg
100 ft. roll	1.9		
100 ft. roll			

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS: "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μg for residual thiosulfate.

A 3x3 grid of 1200mAh NiMH batteries. The batteries are arranged in three rows and three columns. The top row shows the top of the batteries with '1200' and 'NiMH' printed on them. The middle row shows the side of the batteries with '1200' and 'NiMH' printed on them. The bottom row shows the bottom of the batteries with '1200' and 'NiMH' printed on them.

Methylene Blue
Analysis

Customer Name: M. J. J.Address: 100 West 1st St. Buffalo, N. Y.

Your sample film strips have been tested for archival quality (residual thiosulfate concentration). They were tested according to the methylene blue method described by the American National Standards Institute.

Concentrations of less than ($<$) 1.4 μ g (micrograms) indicate archival quality, and greater than ($>$) 1.4 μ g indicate non-archival quality. The test is only meaningful and accurate if performed no later than two weeks after processing. It is our understanding that we have received your film within the 2 week time-frame.

Actual test readings are provided below, as well as "pass/fail" check marks

TEST IDENT.	ACTUAL CONCENTRATION	MEETS ANSI STANDARD ($<$) 1.4 μ g	DOES NOT MEET ANSI STANDARD ($>$) 1.4 μ g
100 West 1st St.	1.2		

Archival quality, as measured by residual thiosulfate concentration, is defined in ANSI Standard IT9.1-AS. "A photographic film composed and treated so that under archival storage conditions it is suitable for the preservation of records having permanent value". This same Standard sets the archival limit at 1.4 μ g for residual thiosulfate.
